

What else is stopping the virus?

Doctors are working very hard to make sure we all stay safe.

But some things we do in our day might have to change to stop the virus.

What changes will there be?

Activities:

- Lots of people getting together in the same place isn't a good idea
- The virus can spread from one person to another if there are lots of people close together
- We might not be able to do some activities because of this

Your neuro OT has lots of other activities ideas.

You can still work on your neurorehabilitation goals.

Ask your neuro OT how you can do these things.

Support:

If the people who look after you are unwell, someone else may have to help. There will be lots of support for you if this happens.

Visits and visitors:

- You might not be able to have as many visits and visitors because of the virus

Your neuro OT has lots of ideas about how to stay in touch with people!
